

Reach Truck Attachments

Reach Trucks are mechanized equipment utilized for loading and storage in certain organizations that maintain storage of cargo to finished commodities on a pallet which are then inserted into lofty shelving units. This loading apparatus helps companies safely and effortlessly amass and retrieve loaded pallets at the same time as ensuring enough storage of commodities that are not immediately required.

The basic reach truck uses an out rigging system installed on the front of the vehicle. A pair of telescoping forks that travel up and down are mounted to the out rigging. A hydraulic system which permits the worker to grab and reposition the freight over the outriggers is also included in the forks. This design delivers a more even balance of the weight and facilitates easier maneuvering between the storage shelves and narrow aisles.

After arriving at the given shelves designed for the pallet, the hydraulics permit the forks to swing and slide the pallet into place. A reach vehicle will sometimes fit into an aisle less than 10 feet across without any issue provided there are no obstacles protruding from the shelving.

Several types of the reach truck are available. The most straightforward unit is the stand-up reach style which will slide forks below the pallet and bring it to a storage location then slide it into place. This style of reach truck is idyllic for shelving units that are no deeper than an individual pallet of goods. A double-reach truck works in the same essential way as the stand-up type but uses telescopic forks that are lengthy enough to slide a pallet into shelves that accommodate two pallets. Straddle reaches are an alternative reach truck variation. This style of reach truck slides beneath the pallet and is also able to grab the sides as well. The straddle reach unit is useful when grasping the sides of the pallet and commodities will not result in damage. They permit straightforward pallet retrieval of a pallet that may be 4th or 5th in line and are effective when the shelving units are accessible in more than one direction.

Production plants, warehouses and even textile companies regularly employ one or more styles of reach truck. They may be used to stockpile pallets of finished goods, storing supplies, materials, equipment, and to preserve the up keep of storage units is everyday practice. Reach trucks are very easy machinery to maneuver to help make good use of your time and accessible storage space.
